discourse of brain nerves cont'd.  
For the chronic state of this ex-  
-sensibility, gentle frictions - cold air -  
& exercise promise success. Considering  
how much sensibil. is increased by a ful-  
-lips of the blood vessels - Dr. shd. not be  
omitted. If it arises from a wound, the  
nerve should be destroyed by the knife, or  
a caustic.

### Lips of Irritability

discovers itself by convulsions or startings  
upon the slightest impressions upon the  
senses of touch - being - having smell.  
- I described a case of it <sup>in a young Worcester</sup> in the yellow  
fever of 1798. The noise of the door as I enter-  
-red the her room, - my voice, - & above  
all, my fingers when I touched her pulse,  
excited startings bordering upon convulsions  
in her whole System.

V From the existence of morbid sensib.  
& Irritab<sup>y</sup>, independently of each other,  
you will now understand the reason why  
in some diseases there is great pain <sup>th</sup> out  
any appearance of morbid action, &  
in others great morbid action, with  
little or no pain. In the one case, the  
moving fibres are prostrated below the moving  
point in the other - the sentient fibres are  
prostrated below the feeling point.

This morbid irritability yielded to 61-3  
and the usual remedies for yellow fever.

This distressing disease of the nerves some-  
times appears in a chronic form. It is excited  
by the human voice - & even by the human  
face. An English Gentleman lately visited this  
city whose whole Nervous System was thrown  
into commotions every time he came into  
company. They were removed when ever he  
was spoken to, or drank to at dinners.  
A Rheumatism suspended them for some  
time. This suggests the propriety of remedies  
which occasion pain - for in this irritable  
state of the nerves, sensibility is generally  
in a deficient state. Pain would probably  
equalize this state of healthy action.

The cause of sensibility & irritability

which is very difficult and hard  
to do so easily. It would  
be much better to get in touch  
with the authorities and  
get the right and the kind of  
advice on the subject. This will be  
the best and the easiest way to  
get the right and the kind of  
advice on the subject.  
It is also difficult to get a  
good advice on the subject  
and the right and the kind of  
advice on the subject. It is also  
a good idea to get a  
good advice on the subject  
and the right and the kind of  
advice on the subject.

constituting inmobility appears in Hysteria & Epilepsy. Its Remedies ~~are~~ were mentioned in treating of those diseases. Van. Invictus; bandages should not be forgotten. I have twice seen them useful. Afterwards the Cold, Bath & exercise shd complete the cure. If - it shd. be attended with plethora, and a full or tense pulse V.S. should not be omitted.

a Defect of sensibility called by Dr Cullen Stupor appears in the Skin - nerves & muscles. we read of persons who have borne pins to be thrust into y<sup>r</sup> flesh without feeling them. The ~~and~~ surgeon in the Island of Jamaica dangerously says talk with composure while under the

amputating knife of a surgeon. Heat &  
cold - fasting and fulness, also emetics &  
- cathartics medicines produce it. Its Remedies  
should be accommodated to its remote causes.  
when from heat - its remedy will be cold,  
when from cold - heat cures it. This  
has often been proved by persons who have  
contracted it in a hot climate, visiting,  
residing in a cold climate & vice versa.

A defect of Irritability - or Torpor  
of the nervous system, appears in the  
languid motions of the limbs - in the  
coldness & dryness of the skin. This is so  
great that Blisters do not act upon it.  
- It appears in the Stomach & bowels,  
- hence they are often invincable by  
the large doses of emetics & purges.

The acute form of this sea disorder is often cured by VS & other depleting remedies. Its chronic form yields to the hot bath- and ~~a~~ <sup>also</sup> exercise - ventilation.

The Inertia of a defect of sensibility & irritability of the nervous system appears in the skin & limbs in the typhus fever. hence patients in it sometimes burn their toes & feet without feeling, or moving them. It appears chiefly in ~~ataxia~~ <sup>M. analgia</sup>, so fatigued in which case, the body partakes nearly as much of the vegetable as the animal nature. Its Remedies are the same as for those diseases or disorders. The hot bath ~~or~~ should first be employed to thaw the (or it will)

re  
ba

Nerves hysteria - afterwards the cold  
bath - & and pain - promise a cure.
